

THERMWOOD

First in CNC Routers

Q: Why Purchase A Thermwood?

A: Better Machines with More Features and Better Support

Better Machines (this means better performance, more reliability and longer life)

- High-Performance, Highly Reliable Siemens Drives (normally only on much more expensive machines)
- Full Function, High Performance CNC Control (compared to limited, bottom end controls)
- Designed using State of the Art ProEngineer CAD/CAM (assures best possible structure and performance)
- Weldments Fully Stress Relieved (eliminates stress warping and cracking down the road)
- Three-Dimensional Laser Compensated (machine is dead accurate everywhere – others can't do this)

More Features (means more productivity and greater throughput)

- Control Nesting (nesting at the control is easier and more productive)
- Free High-End Cabinet Design Software (eCabinet Systems is an industry leading software package)
- Extensive Software Compatibility (control accepts output and can even combine files from a wide variety of design software including ProE, Catia, CabinetVision, eCabinet Systems, KCDw, AutoCAD DXF, etc.)
- Virtual Service (address any problem from configuration to programming by connecting the control directly to service – fast and really easy)
- Automatic Tool Management (manages tooling and tool life – not easy without this feature)
- Maintenance Tracking (manages lubrication and routine maintenance based on actual machine use)
- Error Reporting (graphically displays location of error and suggests remedy – with others finding and fixing is a nightmare)
- Maintenance Videos (on-screen videos guide you through adjustment and repair)
- Dynamic CAD Drawings (view and explode every machine assembly on the control screen for maintenance and part identification)
- Dynamic On Screen Manual (view and search the machine manual right on the control screen)

Better Support (help when you need it)

- In-Depth Machine Training (formal class included with every machine)
- eCabinet Systems Software Training (included with every cabinet machine)
- Available Online Software Training (learn at your own pace with this ongoing program)
- Available Programming and Production Start-Up Assistance (get going quickly)
- Free eCabinet Systems Software Updates (no creeping annual software maintenance cost)
- Free Phone Support (as long as you own your machine)
- Virtual Service (instantly address virtually anything a service visit can – fast, without the service cost)
- Ongoing Control Updates (not available from others – you’re stuck with what you have)
- Free and Open Machine and Software Forums (get help from other users)
- Technical Support Visit Direct from the Factory (single source responsibility should you ever need it)
- Extensive Spare Parts Inventory with Overnight Shipping (should you ever need it)

The bottom line:

Thermwood systems install fast, start up quick, are easier to use and maintain, produce more and last longer.
