Batched drawer boxes

by **Zach Froble**

Posted: **Thu, Aug 09 2007, 4:04PM**

Is there a way to do a batch order of drawer boxes. If not it would be a nice feature.

Thanks,

Zach

Zach,

Here is a method for batching doors described by Scott Vaal. This works great and he states that this method can be used for drawers also but I have not tried drawers yet. As he says in this post. follow the directions to the \"T\".

\"Kerry,

I don't know if you batch doors like this a lot, but here is a fast way to do it by creating one (as a cabinet without other parts) and then changing it to any size in the batch.

Follow these to the \"T\"

- 1.) Load the std base frame less.
- 2.) Delete all cabinet parts except the toe kick.
- 3.) Go to door/drawer editor: set the door you want default and then add it to the cabinet (do not change any door con-settings).
- 4.) Return to main.
- 5.) Go to con-settings -> toe kick tab: set the Height and Inset to zero, and uncheck \"Has Toe\", select OK.
- 6.) Save this cabinet and then batch any size/Qty door of this style that you want.

Regards,

Scott Vaal
