## How to create a new door look.

**Instructor: Joe Dusel Email: [joe@woodistry.com](mailto:joe@woodistry.com) Phone: 760-758-3254**

This process requires you to change files in the Program Files/Thermwood/eCabinet Systems directory. It also assumes proficiency with file manipulation.

1. Select an image of the material you wish to use. For instance, you could pick any of the wood images from the materials/SR-Wood directory. Or you can download an image from the web if you like using something like Google Images. This image should be along the lines of 100 x 100 pixels and somewhere around 2K in size. It also needs to be a JPG file.
2. Copy this image to the Doors/Conestoga/Finishes/(species) directory and also the materials/(species) for whatever species you wish. For example, put it into the “hard maple” directory in the “Doors/Conestoga/Finishes/hard maple” directory.
3. Now, viewing the jpg files in the directory as thumbnails pick one of the finishes that you probably won’t use (like Heather Blue) and rename the files to add “old” to the name just in case you need it at some point.
4. Rename your replacement finish color file to be the name of the file you are replacing, for instance “heatherblue 15sheen.jpg”. This needs to be done exactly. If you misspell it, it will not work.
5. Now copy your new file to the “materials/hard maple” directory. When you go to create door using any of the Conestoga styles you can pick your new finish and get the look you want with a glass panel if you wish.

This is what my new door looked like with a wallpaper image. You can also take a photograph of a material that you want as a texture. This can be of almost anything, but for me it's usually wood. The image will then need to be reduced in size to about 100 x 100 pixels. You can do this using your favorite photo editor, such as PhotoShop. Or you can just use Irfanview which comes with the eCabs software.
